

Survey Technical Information
The Quality of Democracy and Governance in Botswana
Afrobarometer Round 4, 2008

Dates of Fieldwork:	28 September to 16 October 2008
Sample size:	1200
Sampling frame:	2006 population projections provided by the Central Statistics Office (CSO) based on CSO's 2001 national population census
Sample universe:	Citizens age 18 years or older, excluding institutions
Sample design:	Nationally representative, random, clustered, stratified, multistage area probability sample
Stratification:	Districts and urban/semi-urban/rural
Stages:	SSUs (Localities, rural areas only), PSUs (Enumeration Areas), start points, households and respondents
SSU/PSU selection:	Probability proportionate to population size (PPPS)
Cluster size:	Two PSUs per SSU (rural only), 8 households per PSU
Household selection:	Randomly selected start points, followed by walk pattern using 5/10 interval.
Respondent selection:	Gender quota filled by alternating interviews between men and women; respondents of appropriate gender were listed, after which a household member draws a numbered card to select an individual.
Weighting:	Weighted to account for individual selection probabilities
Margin of error:	+/- 3% with 95% confidence level
Fieldwork by:	Department of Political and Administrative Studies, University of Botswana
Survey Languages: (Official translations)	Setswana and English
Main researchers:	Mogopodi Lekorwe, Lucky Mokgatlhe, Mpho Molomo
Outcome rates:	Contact rate: 1.000 Cooperation rate: 0.984 Refusal rate: 0.001 Response rate: 0.984
EA Substitution Rate:	2% (3 EAs)
