# ROUND 5 AFROBAROMETER SURVEY IN UGANDA

2012

## Summary of Results

The Afrobarometer is an independent, non-partisan research instrument that measures the social, political and economic atmosphere in Africa. Between 2<sup>nd</sup> December 2011 and 27<sup>th</sup> February 2012, the Afrobarometer surveyed a nationally representative, random, stratified probability sample of adult Ugandans. The total number of interview was 2400; this was a nationally representative of adult Ugandans.<sup>1</sup> Face-to-face interviews were conducted by Wilsken Agencies, Ltd. in the language of the respondent's choice. The survey covered both urban and rural areas, as well as all four regions of the country and Kampala as a separate fifth region. The sample was drawn by taking the smallest geographic units, Census Enumeration Areas (EAs) and stratifying all EAs across the country into separate lists according to administrative region and urban or rural status. 300 EAs were then randomly selected from these lists with the probability proportionate to its size in the overall population as represented in the 2002 Population and Housing Census (2010 projections). This ensures that every eligible adult had an equal and known chance of being selected. Eight households were then randomly selected within each EA, and a respondent 18 years of age or older was randomly selected from each selected household. A gender quota ensured that every other interview must be with a female. A sample of this size is sufficient to yield an overall margin of error of +/- 2 percent at a confidence level of 95 percent. Local language translations were done in 14 languages: Luganda, Runyankole-Rukiga, Runyoro-Rutooro, Lugbara, Alur, Luo, Ateso, Ngakirimojong, Lumasaba. Madi, Lugwere, Kupsabiny Lusoga and Japdhola.

*We gratefully acknowledge the United States Agency for International Development (USAID) in particular the Uganda Mission for the funding support for this Afrobarometer Round 5 survey.*

**Note:** All figures in the following tables are percentages, rounded to whole numbers. Due to rounding, columns may not add up to exactly 100. Also note that a figure of “0” reported indicates that at least 1 response, but less than 0.5 of all responses, were in this category, whereas a dash (“-”) or blank cell indicates that there were no responses in this category. For Questions all questions, weighted frequency distributions are reported.
